eTenants℠

Technology plays a key role in Brandywine's management efforts. eTenants, a web-based amenity program, offers all tenants and their employees an array of business and personal solutions such as a robust work order system, a complete guide to on-site and area amenities, and property-specific information. Our online resources provide the tools and guidance to assist new tenants with their move coordination, while continuing to serve as a one-stop reference for on-going tenant support.

Benefits

- Expedite processes and enhance overall productivity
- Improve service performance and accountability
- Strengthen communication between tenant and landlord
- Access building and local information in a centralized location

Service Request

Report routine maintenance requests and monitor request process through real-time status updates and reporting tools.

Resource Scheduling

Avoid scheduling conflicts with direct access to view and schedule events for common building resources such as meeting rooms and freight elevators.

HVAC Remote Access

Manage HVAC environments through a customized web interface including floor plan graphics, thermostat settings, and after-hours schedules.

Visitor Scheduling

Pre-authorize visitor access through online scheduling tools and quicken the check-in and notification process.

Building Information

Access key documents and manuals, building contacts, important announcements and local amenities in one convenient location.

Availability of modules will vary according to user access level and property set-up.
